1.19.8	New device support, updated functionality and improved stability.	DN	2025-06-25

## 3. Product description

DST 001 is a computer software application that is used by service personnel to configure, update, and troubleshoot Flygt products. The application runs on a Windows PC connected to the product via a PCM 001 converter using communication leads in the SUBCAB cable.

## 4. General changes

New device support:

- It is now possible to connect, configure and read out information from a PIM 001 in DST 001. The PIM 001, a pump integrated memory, is a device mounted internally in the connection housing of pumps and is capable of collecting measurements of current and temperature over a 6-month period.

New functionality:

- It is now possible to collect all application logs directly via DST. The functionality is found in the “Help” tab. Exporting the logs generates a .zip file at the desired location. These logs can be requested by support for easier troubleshooting of any issues.

Improvements:

- General usability and stability improvements

## 5. Known issues

If the software update process, for some reason, should fail, try the following:

- Disconnect from the machine in DST
- Turn off the machine
- Turn on the machine
- Connect to the machine in DST
- Install the package again

Ensure you are using the latest software package applicable for your machine.

## 6. Compatibility

This DST version supports the following products:

- 4220, 4230 and 4320 Adaptive mixers and high efficiency PP pumps
- Concertor pumps
- 2960 Bibo Alpha drainage pumps
- Pareo enabled drainage pumps
- PCM 001
- PIM 001

Machine update packages can be downloaded manually if automatic updates in DST are not used. They are found on <https://xapps.xyleminc.com/tpi/> for the respective product.

## 7. Update recommendation

The recommendation is to always update to latest version of DST 001.

The user must always ensure the machine packages used for updating, upgrading or factory resetting the machine is of the latest version to ensure full compatibility with the DST.

This is a minor update.

<http://tpi.xyleminc.com>

**Notice!** Update for PCM 001 is only possible from SW version 1.3.3 or later. If you have an older version, please update to 1.3.3 first, then update to the latest version.

Please read the Package release note and product documentation, some features supported in DST might not be released in machines/pumps yet.

## 8. Platform requirements

Minimum system requirements:

- Windows 10 v21H2

## 9. Testing and test results

Complete system and integration testing, approved by Xylem R&D for release for Flygt globally.

## 10. Availability

The latest DST version can be downloaded from TPI: on the tab “Sales Code” search for DST 001.

DST 001 can also be downloaded from \\world\software\Xylem\Xylem DST on the Xylem intranet.

The latest PCM version can be downloaded from TPI: on the tab Sales Code search for Sales code PCM 001.
